

MATERIALS NEEDED

Red, White & BBQ-Oven Mitt Helpful Tips:

Images are taken from instructions.

Before you begin, examine the seam joining the two halves of the oven mitt. If the seam is more than $\frac{1}{4}$ " from the edge, turning the thumb may be more difficult after the mitt is completed.

To address this, unpick the seam 5" down from the top of the thumb, then realign the two halves of the mitt and sew a new seam. Begin the new seam at the end of the remaining existing seam. Then, sewing toward the thumb, taper the new seam to run no more than $\frac{1}{4}$ " from the edge.

When sewing the oven mitt blank together, follow the instructions carefully and be sure to clip around the thumb as directed.

When turning the oven mitt right side out, turning and rounding the thumb may take some effort due to the bulk of the material.

If using a blunt tip, use the widest end of the tool to avoid puncturing the material or the seam; or use a wider tool such as the handle of a wooden spoon.

It is recommended to turn the thumb before turning the rest of the oven mitt.

- Clip notch where thumb and finger section meet (shown in **yellow**). Clip 4 additional notches on thumb curve to reduce bulk (shown in **red**).
- Carefully turn oven mitt **right side out**. Poke thumb with a blunt tip to round as needed.

Note: Be careful not to cut the seams on either side of oven mitt while clipping.

Tip: Turn the thumb **right side out** first.
